

Caring For Your Artwork

Varnished For Protection

I use Gamvar to finish paintings. This is the highest quality product on the market made by Gamblin in the USA. This varnish protects the work without discoloring it, keeps dust on a top level that never touches the original artwork, and it can be removed or re-applied if desired. This finish is meant to protect for the life of the painting.

Wire Hanger

A wire hanger is attached to my paintings that are cradled with a depth of 3/4" or more, making framing optional. This is a stainless steel wire that holds up to 40 lbs, made in the USA.

Display Options

Most paintings can be hung directly on the wall via the wire hanger. Also recommended are table-top easels, float frames or open frames. Open frames are frames without glass. Typically oil paintings are not displayed with glass in a frame in order to prevent damage from the glass touching the paint or condensation.

How To Clean

To remove dust from your oil painting, lightly brush over the surface using a soft cloth or duster.
